Chocolate Gold Plating

Chocolate Gold is acidic gold plating. It can plate bright flash chocolate gold colour with higher hardness than pure gold. It is suitable for decorative plating in jewellery, watch, etc.

Make Up Bath:

The Chocolate Gold make up solution may be delivered in concentrated solution or ready to use solution. If it is supplied in concentrated solution, it is only required to top up by distilled water to the final volume. Then, it is ready to use for plating

Contamination Control

1. Metallic contamination

Items shall be cleaned thoroughly and final-rinsed by distilled water before gold plating to prevent metallic contamination.

2. Organic contamination

It is recommended conducting carbon treatment once in 1 to 2 months. Add 0.1-0.5g/L active carbon powder to remove the organic contamination.
